

ANCHORAGE PONTOONS LIMITED

NEWSLETTER #1 JULY 2008

Anchorage Pontoons Ltd (formerly Superior Jetties & Pontoons Ltd and Salta Docks & Marine Ltd) is proud to announce its new range of PE pontoons manufactured here in New Zealand.

Poor quality and supply of an overseas product necessitated this move and, as a consequence, we have been able to improve and develop the basic concept.

Our pontoons are made from a higher grade polyethelene and other improved design features include flat decks and structural integrity. The connectors are stronger and more flexible and therefore more effective.

We are in the process of adding new products to the range and will keep you informed by way of a newsletter programme.

Nominal Pontoon Size:
 3m x 2m 3m x 1 1/2m 3m x 1m 1m x 1 1/2m

At Lake Hawea we were faced with a unique location and unusual conditions. This hydro-lake has an 8 metre rise and fall in the water level and the required overall length of the floating jetty needed to be 70 metres.

Anchorage Pontoons Ltd tackled the challenge and overcame the problems during installation.

This pontoon for a private client in Lake Wakatipu, Queenstown, confronted us with the need for a special anchoring system as normal piling was not appropriate. Radial arms attached to a concrete abutment socketed into the rocks provided an excellent method of holding this pontoon in place. A jet ski dock was attached at one end.

Anchorage Pontoons Ltd was selected for this project at Waitara because the volume of debris and logs would have damaged any other pontoon system. The locals in the area now have a facility which allows them access to the water at all levels of the tide.

Anchorage Pontoons Ltd has the agency for a number of marine related products. MARINE SANITATION PTY LTD is the one we would like to introduce you to this month.

WHY IS “MARINE SANITATIONS PUMP” OUT STATION SUPERIOR TO MOST?

- The unique Helical Rotor Pump outperforms any diaphragm or vacuum pump of similar size.
 - A flow rate of up to 2.2 litres/second
 - A maximum Suction lift of 7.0m
 - A maximum vertical pressure rise of 30.0m
 - At a 3.0m head it will push in excess of 1.0km horizontally
 - Ease of maintenance
 - Includes run dry protection
- The wash down hose uses sea, river or town water supply thereby saving our precious and valuable drinking water also the need to comply with Back Flow prevention.
- The ability to have a Portable Toilet Emptying Unit in conjunction with the Discharge Unit, saving costs by utilizing the same pump.
- The brushed 316 Stainless Steel Cabinet makes it very easy to keep clean and remove any graffiti.
